**WHO ARE THEY?**

GENERATION

ALPHA

**WHAT ISSUES DOES YOUR GENERATION  
FACE THAT YOUR PARENTS DIDN'T?**

# GENERATION ALPHA

# ON TRACK TO BE THE MOST VISIBLE GENERATION

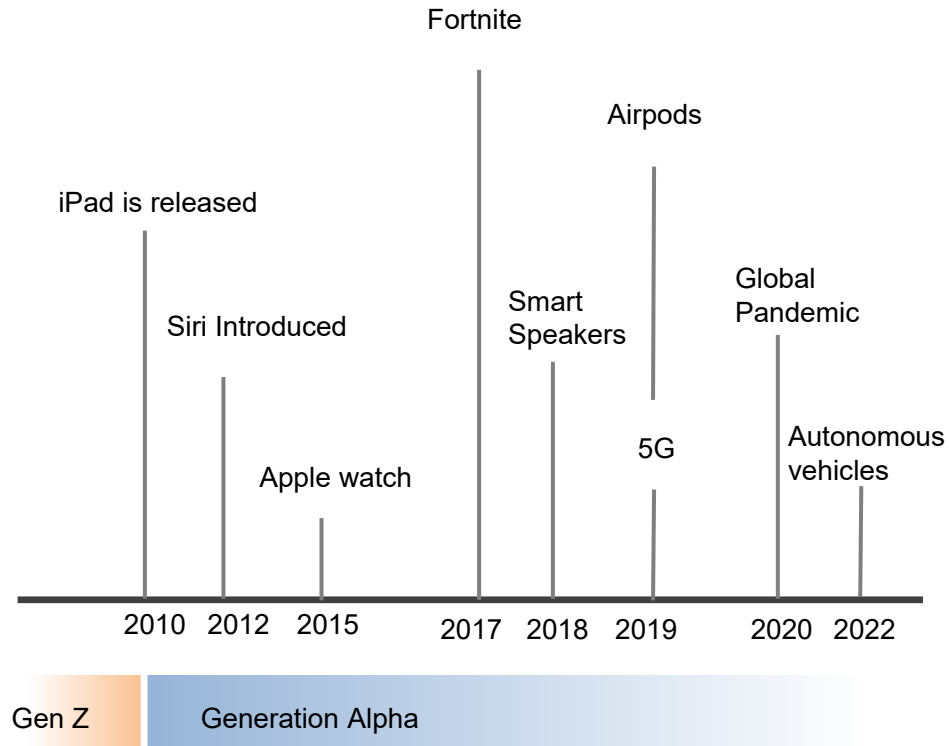

Gen Alpha is being parented primarily by Millennials so many have had their names and faces online since birth

# TRUE DIGITAL NATIVES

First Generation Born Entirely in the 21<sup>st</sup> Century

## THE BREAK DOWN OF TRADITIONAL POWER

Kids in Gen Alpha know anyone has the power to get his or her voice heard. One person on Twitter can be heard by just as many people as the president on a nationally televised address.

**CONCERNED ABOUT  
CLIMATE CHANGE**

**CONCERNED ABOUT SAFETY**

**CONCERNED ABOUT  
RACISM**

**CONCERNED ABOUT  
CYBER BULLYING**

**GEN ALPHA** are accustomed to having immediate access to information which makes **LECTURING** and old models of learning **OBSOLETE**. They will learn at their own pace with **PERZONALIZED** learning experiences targeted to keep up with them.

**CLASSROOMS**  
**ONLINE LEARNING MODULES**

PROJECT BASED LEARNING AT THE BRANCH SCHOOL

SEQUOIA

# Project-based Learning for Middle School

First decade: Sequoia

- Oil Exploration and recovery, and marine life impact
- Environmentally-sensitive home design
- Archeological exploration, interpretation, and curation
- And more...

Supported by community resources (parents, staff) and field trips

Hands-on activities

Presentation of final products to other parts of school

- Upper elementary students vote on go/no go for drilling

- Middle schoolers build online archeological museum and physical museum and act as docents to tour elementary students

# Project-based Learning for Middle School

New site: Royal Branch Archipelago

First PBL project:

- Landforms/biomes
- Cities
- Economic activities
- Island/state maps
- State flags
- Archipelago constitution

# Construction-year projects

Harvey Construction: 3 hard-hat site tours

- Steel erection

- Building envelope

- Construction progress

Kirksey Architects: 3 presentations with student interactions

- Building design

- Sustainability / LEED

- Sustainable finishes

Outcomes:

- Guidance on career choices

- Interest in and commitment to sustainability

  - low-tech (passive energy conservation)

  - high-tech (geothermal wells, solar panels)

**CRITTER**  
*don't*  
**UTTER!**

## PLAY THEORY

Discussing a common project vision

## “Kids vision summary”

A place that is modern, smart, and  
connected to nature, peaceful, colorful  
and bright and designed especially for  
us.. kids

## “adult vision summary”

A campus where learning is integrated with nature, and a space that is inspired, and innovative and celebrates the unique diversity of this community

V I S I O N I N G

## IMAGE EXTRAVAGANZA

Identifying project likes and dislikes

like

- outdoor learning spaces
- modern, and smart
- natural daylight and big windows
- open spaces and cozy spaces –

It looks unstable

its a nice design

I don't like all the wood

there is no color of fun. Just repetitive

scares me, it doesn't look safe

fear of collapsing

very blocky

too boring!

- monotonous, blank facades
- design elements that seemed dangerous and unstable
- too blocky , boring, traditional

# dislike

## POST CARDS

Identifying memories and future potential

"Bye Mom!" i say as i leap out of the car. I take the escalator up to the 2nd floor to my locker. I grab my math textbooks and go to math class. "Ok, go to the windows," Ms. Davis says. "Your equation to solve is  $x = (24 \cdot 2) - 3$ ." We wrote on the windows to solve the equation. As the bell rang, i leave and go to the coffee shop and cafe during passing period because i was getting tired and i needed some coffee and i needed a snack. I run to Spanish class with my coffee and food. "Hola Adriana, yo quiero comida," Ms. Mitchell said. "Ok," i say as i share food with the class. Because in this fictional world, we are allowed to share food and i am a good person. In the Spanish classroom, there is a lot of flexible seating and it is fun and colorful.

Kirksey

I come out of my car to see a incredible new modern building, there are windows everywhere. The colors along the walls are black, white, purple & green. It makes me feel like im in the future. The inside is ten times better though, with a glass staircase and a mural of a tree. It really represents our school pride, there are two floors, I love them both the same though. I love have amazing windows and the classes are awesome. I feel so lucky to be one of the people who designed this building, so I walk inside. Ana Alonso

Kirksey

Aava

I would want our school to be two floors, but not super huge. Kind like our current school with another floor on it, but with wider hallways. I would like it to have a modern look with lots of color and windows, with quite a bit of white. I would also like lockers that are rainbow, and classrooms that are specially designed for each class room. An example could be a science room with a wall with the solar system. It would be nice if we had an area for students to hang out and do home work with nice, modern and comfy chairs.

Kirksey

I think that the building should have a modern type of architecture and if you entered it would likely have a type of lobby to it and 2 different sections. 1 section would lead to science ELA and SS and the other section would have the math and on the second floor there would be an auditorium a library and (if this ever gets added) a black box theater (and would have plant life on the inside and outside)

Patrick

**Life-Cycle Cost Considers The Following:**

- Water Cost
- Chemical Treatment Cost
- Electricity Cost
- Equipment Replacement Cost

**Life-Cycle Cost Does NOT Consider The Following:**

- Yearly Maintenance Cost
- Reduced PV Purchase Cost

## FLUID COOLER VS. 56 WELLS OPTION

## FLUID COOLER VS. 80 WELLS OPTION

## The Branch School Curriculum Integration Ideas

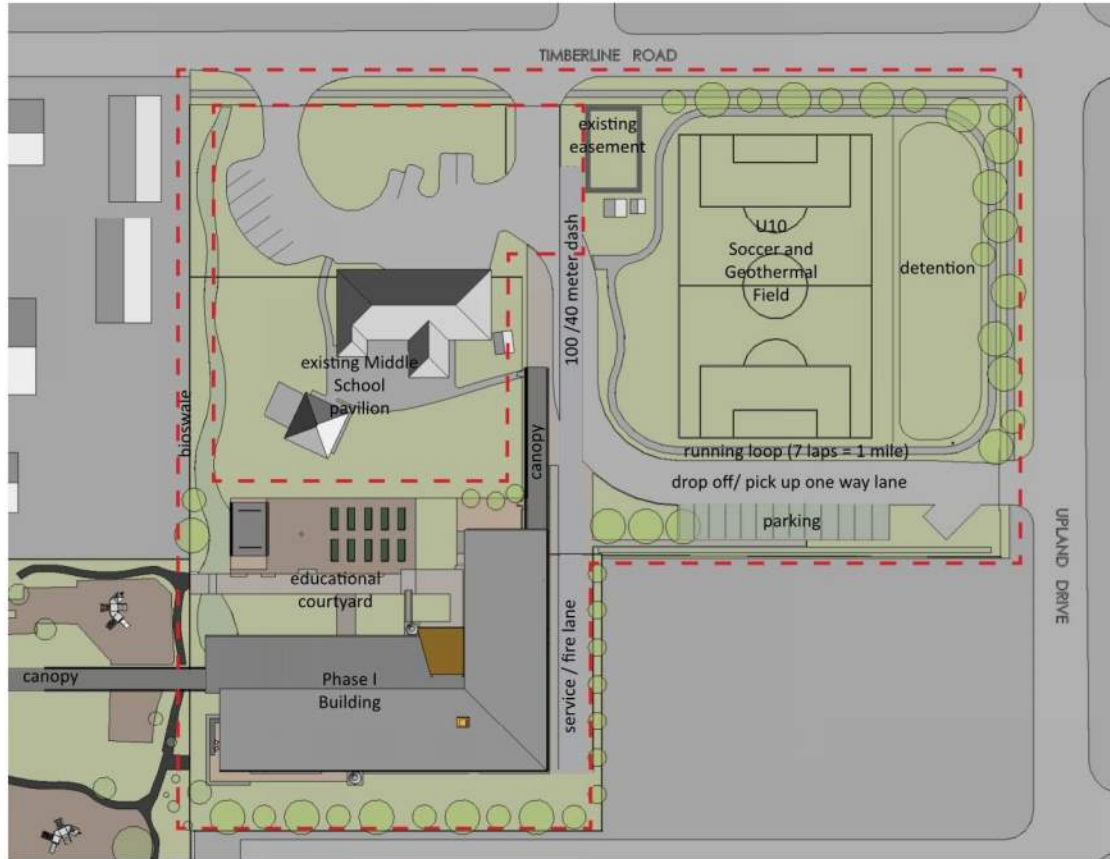

## Learning Organism – Teaching Tool

Idea		
1	Meter individual classrooms to allow competitions between classes for energy usage.	
2	Draw comparisons between building systems and living organisms systems	Pure Curriculum integration
3	Use building as a teaching tool be designing systems to encourage occupants learn how to control the building and make decisions on how to save energy. Learn how to balance comfort and sustainability to make realistic decisions that can cause positive effect on school energy usage and more importantly create more sustainable people at a younger age.	Pure Curriculum Integration
4	Geothermal well-field temperature measurements for students to see how well-field temperature changes over time. Provide real readouts that the students can access by BAS or by actual measurements at well.	Design Components Required
5	In-Design curriculum integration. We can simplify our EUI goal estimations and use that to create a small project for The Branch School. They can do their own calcs and determine what they thing our EUI needs to be.	Pure Curriculum Integration
6	In-Design curriculum integration. We can simplify our WUI (Water Use Intensity gallons/sf) goal estimations and use that to create a small project for The Branch School. They can do their own calcs and determine what they thing our WUI needs to be.	Pure Curriculum Integration
7	Building Curriculum integration (during construction or after occupancy). Student project to calculate how much pipe we have buried in the geothermal well-field. Can tie this into actually seeing installed piping.	Pure Curriculum Integration
8	Install tunable white lighting in all classrooms that automatically adjusts to best match daylight. Override controls to select specific CCT. Students can experience how light can affect mood, the 'feel' of a space, and learn about effect on circadian rhythms. In art classrooms, they can see how the color of the light affects how their art appears.	Design Components Required
9	Add windows to the mechanical room, so students can see what type of HVAC equipment is installed in the building.	Design Components Required
10	Carbon Footprint. Student project to calculate carbon footprint of TBS, we can share our calculators as a starting point.	Pure Curriculum Integration
11	Carbon Handprint. Student project to calculate carbon handprint of TBS, we can share our calculators as a starting point.	Pure Curriculum Integration
12	Foodprint & Compost tracking - students can audit their food, bring compostable waste for composting & then use it in landscape.	Pure Curriculum Integration
13	Waste tracking - plastic, aluminum, glass and non-recycled waste can be tracked by estimated volume (or weighed) as part of student projects.	Pure Curriculum Integration
14	Educational gardens: different hieght planter boxes with drains	Design Components Required/ Curriculum
15	Sun dial: vertical metal post	Design Components Required/ Curriculum
16	Rain works: cistern with meter, concrete trough with gates for experiments; concrete chanel or bioswale like conveyance	Design Components Required/ Curriculum
17	Bioswales : collect samples	Design Components Required/ Curriculum
18	Wind Turbine with meter : students can monitor	Design Components Required/ Curriculum
19	Kinnetic wind sculptures: students to place at plaza	Design Components Required/ Curriculum
20	Solar panel on post at standing level: students can monitor, see it power soemthing	Design Components Required/ Curriculum
21	Art chalk mural at breezeway: teaching wall / art mural	Design Components Required/ Curriculum
22	Wind hearth: measuring wind, gravity experiments	Design Components Required/ Curriculum
23	Interior shadow study: mullions and colored glass at clerestory project color at different areas and levels throughout year; could also be glass hanging sculpture	Design Components Required/ Curriculum
24	Stairs: applied graphics that can interchange - start with calorie count, art class could develop with math	Design Components Required/ Curriculum
25	Stair guardrail track friction test : provide painted steel track that ball can go down	Design Components Required/ Curriculum
26	Measurements in breezeway: control joints on floor in metric	Design Components Required/ Curriculum
27	Measurements in breezeway: marks on wall in imperical	Design Components Required/ Curriculum
28	Weather station pavilion	Design Components Required

## Learning Organism – Teaching Tool

- energy dashboard
- submeter power consumption
- tunnable light at Art2D
- window into mechanical rooms
- CO2 sensors
- monitor geothermal
- sun dial plaza
- bottle fillers
- educational garden
- rainworks
- bioswales/ ditches
- chalk art murals
- wind hearth and scoop
- track at stair
- measuring metrics
- exposed utilities
- voice pipe

Site Plan

First Floor Plan

The Branch School

**WHAT DO YOU LIKE ABOUT YOUR NEW SCHOOL?**

**HOW WILL IT CHANGE YOUR LEARNING?**

TEACHING STUDENTS

# THE LESSONS

## LESSON 1 - HOW DID WE GET HERE

### WHY I'M AN ARCHITECT

#### WHAT DO WE DO? WE TELL A STORY

- a) DEVELOP A CONCEPT
- b) WHAT IS OUR CONCEPT

#### THE DESIGN OF TBS

- a) TAKING THE CONCEPT AND INTO A BUILDING
- b) WHAT MAKES IT UNIQUE – IT'S AN ECO SYSTEM

#### TEAM OF PEOPLE – COLLABORATION

#### THE SYSTEMS OF TBS

- a) WHAT IS GEOTHERMAL
- b) WHAT IS THE STRUCTURAL SYSTEM

#### MATERIALS

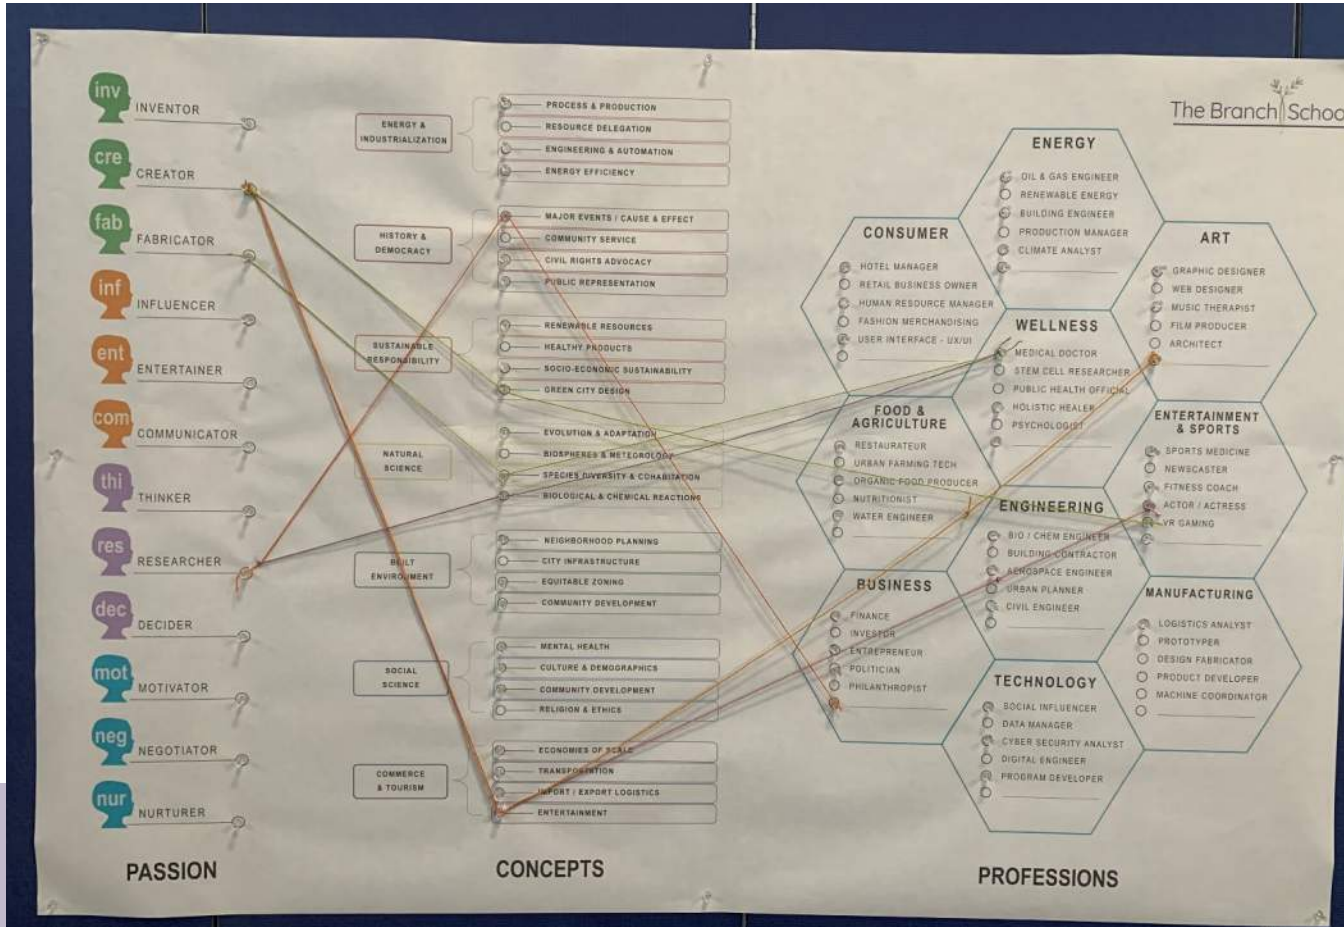

- a) EXTERIOR
- b) INTERIOR

#### UNIQUE ARCHITECTURAL DETAILS AND MATERIALS

- a) OPERABLE WINDOWS
- b) RAIN WATER COLLECTION
- c) RAIN WORKS

# PASSION, PROGRAMS AND PROFESSIONS

## LESSON 2 – SUSTAINABILITY

WHAT IS YOUR ECOSYSTEM?

ACTIVITY – SHOW ME YOUR ECOSYSTEM

SUSTAINABLE AND RESILIENT

HOW IS LEED INCORPORATED INTO YOUR SCHOOL

ACTIVITY – MANAGING OUR NATURAL RESOURCES

GEOHERMAL SYSTEM

HOW DO YOU USE THE EARTH TO CREATE AN ENERGY  
EFFICIENT SYSTEM

ACTIVITY – CYCLES AND SYSTEMS

**YOUR ECOSYSTEM**

### Restoring Our Native Prairies

The Katy Prairie Conservancy has protected over 1,000 acres of native coastal prairie from development since 1995.

Over a generation past, for Native Americans, less than 1% of our native coastal prairie is still in prairie condition today. Restoring fragments of native prairie provides natural habitat for many species of birds, grassland songbirds, insects, reptiles, and amphibians.

In 2004, Katy Prairie Conservancy staff and volunteers began working to restore the Katy prairie prairie beyond the game. A series of strategic, long-term projects and conservation initiatives designed to secure that native prairie continue to exist for future generations, and help to help restore this important wild, to help our town, and go to: [www.katyprairie.org](http://www.katyprairie.org)

**A Prairie Begins**

With a new site, Katy Prairie Conservancy staff and volunteers began working to restore the Katy prairie prairie beyond the game. A series of strategic, long-term projects and conservation initiatives designed to secure that native prairie continue to exist for future generations, and help to help restore this important wild, to help our town, and go to: [www.katyprairie.org](http://www.katyprairie.org)

**Prairie for the 21st Century**

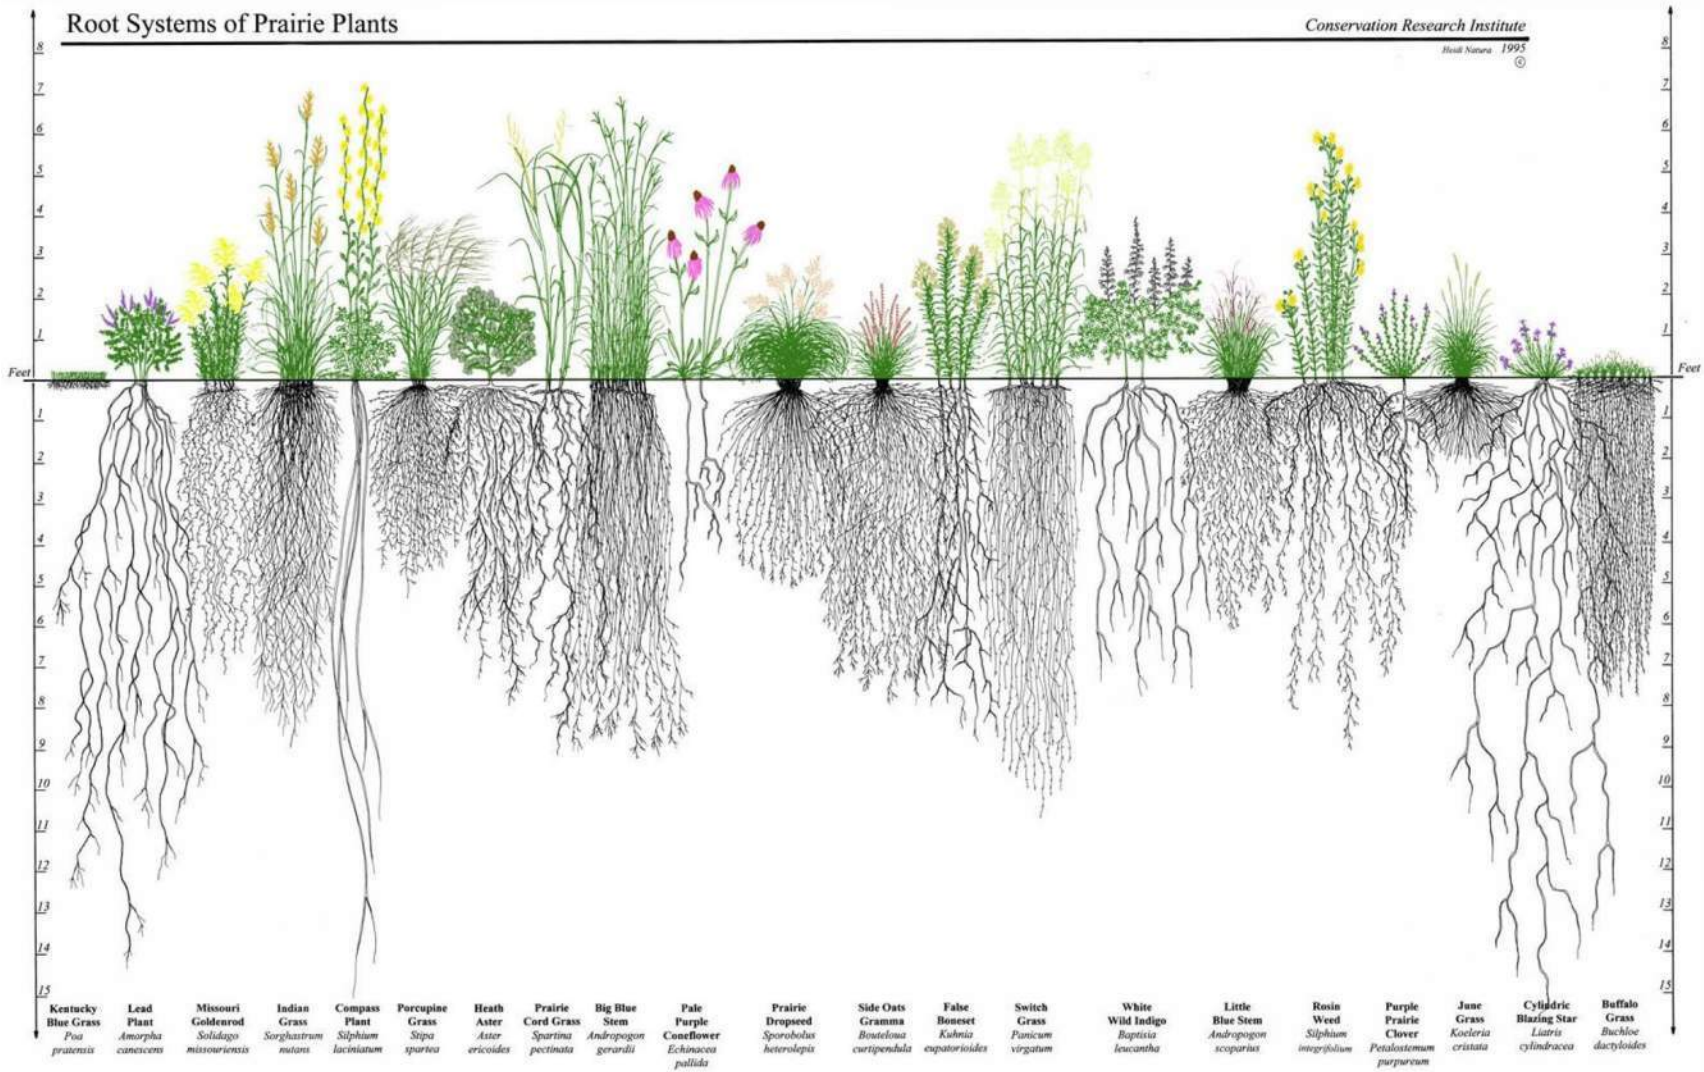

With a new site, Katy Prairie Conservancy staff and volunteers began working to restore the Katy prairie prairie beyond the game. A series of strategic, long-term projects and conservation initiatives designed to secure that native prairie continue to exist for future generations, and help to help restore this important wild, to help our town, and go to: [www.katyprairie.org](http://www.katyprairie.org)

**YOUR SITE HISTORY**  
identifying what's special about this place

# Root Systems of Prairie Plants

Bear Creek Pioneers Park    The Branch School    Memorial Park    Buffalo Bayou    Downtown

Rice University    Herman Park    Houston Zoo    University of Houston

**Site plan drawing worksheet:** Your campus has lots of different habitats for plants, animals and people

- Identify the different areas of habitat, and describe the types of plants, birds and animals that would be in those spaces
- Draw a seasonal time line that shows when the animals would come and go.

**Site Section worksheet:** The climate around your campus is created by the way the **wind blows** and the way the sun goes.

- a. Show us you think the wind will move across your site and through the building, and how the wind might be affected by the buildings and trees.
- b. Show us where you would put additional elements on campus, like picnic tables, wind mills, or a weather station, to create the best micro climate for different activities

**NET ZERO**

**ENERGY**

**NET ZERO  
WATER**

**Site plan drawing worksheet: Energy and Atmosphere** | Solar Design: The Sun/sunlight moves around and through your site

- Draw the sun path and show the best places to put solar panels
- Identify the shade areas for various activities. You can show or add trees and create covered areas.

**Site Section worksheet: Water Efficiency** | Water Use and Management: The rain can be collected and water can be saved on your site and in your building

a. Draw the water path from the roof to the site showing how it can be collected and how it drains

b. Toilets can use less water through the use of low flow fixtures. Calculate the water savings that you have in your building.

**Site Section worksheet: Water Efficiency | Water Use and Management:** The rain can be collected and water can be saved on your site and in your building

a. Draw the water path from the roof to the site showing how it can be collected and how it drains

b. Toilets can use less water through the use of low flow fixtures. Calculate the water savings that you have in your building.

# Air Conditioning – A Quick Engineering Lesson

Law of Conservation of Energy: *Energy can neither be created nor destroyed.*

AKA The First Law of Thermodynamics

Thermodynamics describes the relationship between heat, work, temperature, and energy

# What is Geothermal Air Conditioning?

Geothermal Air Conditioning uses underground pipes filled with water to condition the building by transferring heat to (summer) and from (winter) the ground. Unlike the air temperature, ground temperatures stay relatively the same year-round which makes the transfer of heat more efficient than traditional air conditioning methods.

# Remember: Energy Can Neither Be Created Nor Destroyed.

Heat is a form of energy, so, where does the heat go when it leaves your house?

## Traditional Air Conditioning

The air outside is already hot, and now we have to work to push more heat into it. That takes more work!

## Geothermal Air Conditioning

The ground is cool so we do less work to push

**Goal Achieved!**

**Geothermal Air Conditioning = Less Work Required = More Energy Efficient = More Sustainable**

# Geothermal Facts – The Branch School

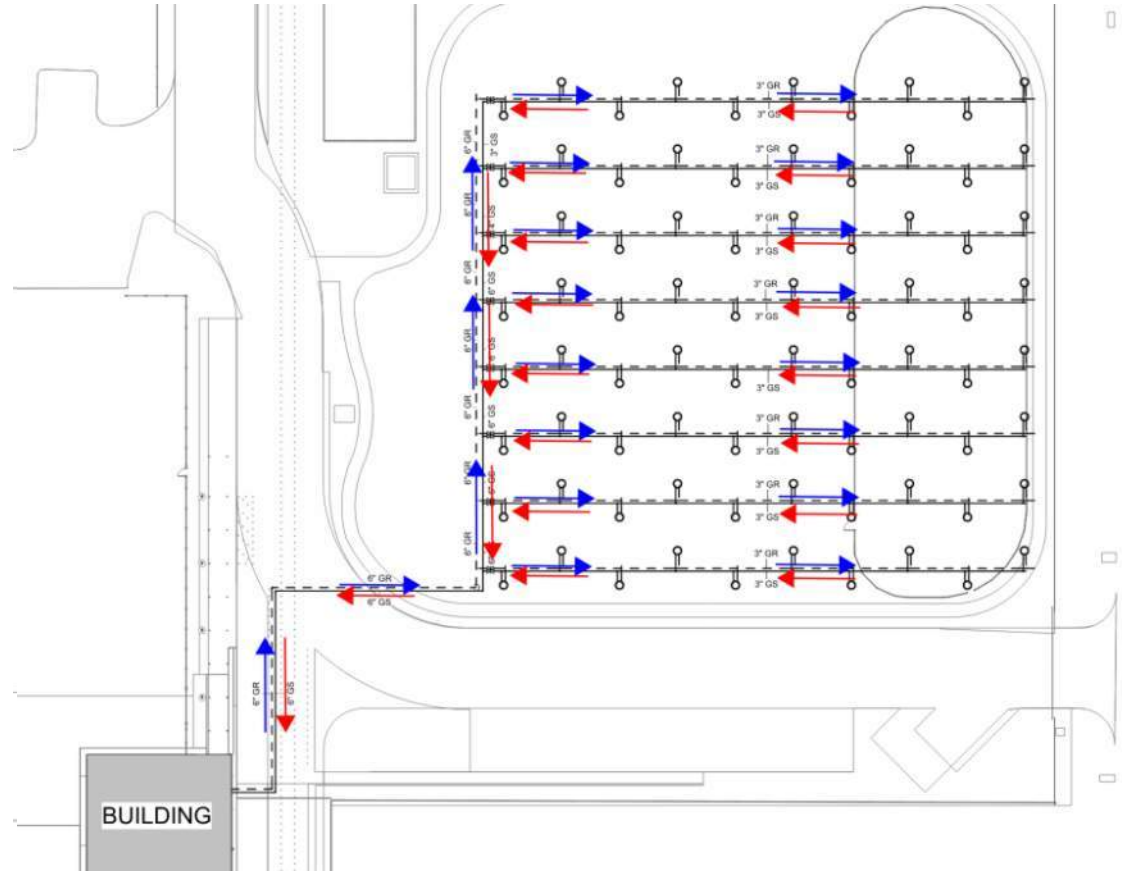

- The geothermal well-field consists of 80 wells. Each well is 300 ft deep. That's the same length as a football field or the height of the Statue of Liberty.

- Each well is 20 ft apart from the next

- The geothermal well-field is made up of 10 miles of buried pipe.
- There are 4700 gallons of water in the geothermal well-field.

- In summer time, the geothermal return pipes flow warm water from the building to the well-field. The geothermal supply pipes flow cold water from the well-field to the building.
- In winter time, the geothermal return pipes flow cold water from the building to the well-field. The geothermal supply pipes flow warm water from the well-field to the building.

**Site Section worksheet: Geothermal| Heating and Cooling:**

- 1) Draw in all 80 well locations. Show each well with a small circle. Remember, keep all wells located within the dashed line above, and keep the wells at least 20 feet apart.
- 2) Draw in the geothermal supply and geothermal return lines from the Building to the Well-Field. Show the Geothermal Return line as a dashed line labeled "GR". Show the Geothermal Supply line as a solid line labeled "GS".
- 3) Show the direction of flow of warm water with a red arrow.
- 4) Show the direction of flow of cold water with a blue arrow.

**Helpful Information:**

- 1) In the winter time, the geothermal return line flows cold water from the building to the well-field.
- 2) In the winter time, the geothermal supply line flows warm water from the well-field to the building.
- 3) In the summer time, the geothermal return line flows warm water from the building to the well-field.
- 4) In the summer time, the geothermal supply line flows cold water from the well-field to the building

## COLOR MEANING

COLOR MEANING

*Site Colors*

**CALM**

**BRIGHT**

**SMART**

1. As a team, select 2-3 descriptive words that you want the existing school to portray.
2. On the existing plan, each group member to pick a space.
3. Using magazines, cut out inspirational images that relate to team descriptive words. Include images of spaces, furniture, etc. to visually describe your space.
4. As a team, discuss each space if it falls into a united vision of the descriptive words.

A circular wooden bee house, also known as a bee hotel, is mounted on a chain-link fence. The structure is filled with numerous small, cylindrical holes of varying diameters, each made from a different natural material like bamboo, reeds, or dried grasses. The holes are arranged in a somewhat random pattern, creating a textured, porous appearance. The background consists of a chain-link fence and lush green foliage, suggesting an outdoor garden or park setting. The word "MATERIALS" is overlaid in large, white, bold, sans-serif capital letters at the bottom of the image.

**MATERIALS**

# BodyBurden

## The Pollution in Newborns

A benchmark investigation of industrial chemicals, pollutants, and pesticides in human umbilical cord blood

<b>Hg</b>	<b>Mercury (Hg) - tested for 1, found 1</b> Pollutant from coal-fired power plants, mercury-containing products, and certain industrial processes. Accumulates in seafood. Harms brain development and function.
<b>PAH</b>	<b>Polyaromatic hydrocarbons (PAHs) - tested for 18, found 9</b> Pollutants from burning gasoline and garbage. Linked to cancer. Accumulates in food chain.
<b>BD/F</b>	<b>Polybrominated dibenzodioxins and furans (PBDD/F) - tested for 12, found 7</b> Contaminants in brominated flame retardants. Pollutants and byproducts from plastic production and incineration. Accumulate in food chain. Toxic to developing endocrine (hormone) system
<b>PFC</b>	<b>Perfluorinated chemicals (PFCs) - tested for 12, found 9</b> Active ingredients or breakdown products of Teflon, Scotchgard, fabric and carpet protectors, food wrap coatings. Global contaminants. Accumulate in the environment and the food chain. Linked to cancer, birth defects, and more.
<b>D/F</b>	<b>Polychlorinated dibenzodioxins and furans (PCDD/F) - tested for 17, found 11</b> Pollutants, by-products of PVC production, industrial bleaching, and incineration. Cause cancer in humans. Persist for decades in the environment. Very toxic to developing endocrine (hormone) system.
<b>OC</b>	<b>Organochlorine pesticides (OCs) - tested for 28, found 21</b> DDT, chlordane and other pesticides. Largely banned in the U.S. Persist for decades in the environment. Accumulate up the food chain, to man. Cause cancer and numerous reproductive effects.
<b>PBDE</b>	<b>Polybrominated diphenyl ethers (PBDEs) - tested for 46, found 32</b> Flame retardant in furniture foam, computers, and televisions. Accumulates in the food chain and human tissues. Adversely affects brain development and the thyroid.
<b>CN</b>	<b>Polychlorinated Naphthalenes (PCNs) - tested for 70, found 50</b> Wood preservatives, varnishes, machine lubricating oils, waste incineration. Common PCB contaminant. Contaminate the food chain. Cause liver and kidney damage.
<b>PCB</b>	<b>Polychlorinated biphenyls (PCBs) - tested for 209, found 147</b> Industrial insulators and lubricants. Banned in the U.S. in 1976. Persist for decades in the environment. Accumulate up the food chain, to man. Cause cancer and nervous system problems.

Health Product  
DECLARATION

## Materials and Resources Scavenger Hunt

1. What product is Cradle to Cradle certified and made from windshield film?

2. What product has a PVC-Free WellBAC comfort cushion standard backing? AND that same backing is 40.9% Pre-Consumer Recycled Content?

(Hint: It also has a UL Certified Environmental Product Declaration)

3. What product has a Solar Heat Gain Coefficient that equals 0.28 and a UV Transmission at 8%?

4. What product is PVC free, Phthalate Free and Red List Chemical free? This product also has a plan that has used the IMPACT program to recycle more than 30,100,000 pounds of rubber in the past 7 years. (They use this to make municipal mulch and rubber truck flaps)

5. What product, made of ceramic, has a Health Product Declaration from V.2.2?

6. What product is made by a company called Koroseal and is sometimes referred to as "walltalkers"

7. This product, made by Johns Manville, is Formaldehyde-free and will not off-gas formaldehyde in the indoor environment. It also has been Certified for Recycled Content by SCS Global Services. (The North American average is 30% post-consumer recycled content.)

8. What product provides LEED v3 Credit Assistance for Recycled Content offering 85% pre-consumer and 0% post-consumer for the entire assembly? (Hint: It is made in Wisconsin, 1200 miles away)

9. What product is used more than any other for the interior finishes and has ZERO VOC?

10. What product has 3 Third Party Sustainability Certifications and a BioShield Treatment included for added mold and mildew resistance?
